

BAKER TILLY

## EVALUATE YOUR CYBER SECURITY POSTURE WITH THE BAKER TILLY'S CYBER SECURITY ASSESSMENT

### Vulnerability Assessment (VA) and Pen Test Tool

**Cyber Crime** is no longer a technical issue. It is one of the biggest threats facing organisations of all sizes and in all industries, and requires the immediate attention from both the C-Suite and the Board of Directors to tackle quickly before their organisations face a compromise to their intellectual property and financial information, reputational damage or lost business opportunities.

In view of this, Baker Tilly, in collaboration with its Cyber Security Partner, Sysarmy Sdn Bhd, has recently launched a cyber security assessment, aimed at helping organisations to evaluate their overall inherent cyber risk and to determine their cybersecurity preparedness.

Our Cyber Security Assessment includes a Vulnerability Assessment & Penetration Test for three IP Addresses.

For Baker Tilly clients, you are entitled to enjoy a special rate for your first cyber security assessment with us. To learn more about the assessment, kindly contact us at +603 – 2297 1024 or email [info@bakertillymh.com.my](mailto:info@bakertillymh.com.my).

### What is the Vulnerability Assessment and Penetration Tool?

- n Vulnerability Assessment enables you to understand the critical information, systems and the security posture in your organisation. The security posture is the way information security is implemented. Your network will be scanned for vulnerabilities and impact.
- n Penetration Test is a testing method or a system that looks for security vulnerabilities, which potentially allows a break into a system or network. An assessment will provide recommendations for improvement, which allows your company to achieve a security goal that mitigates cyber risk.

**“Do not be the next victim of Cybercrimes. Take immediate steps to protect your digital assets from unauthorised usage and or for criminal intent.”**
